TechNix®

SUBSWAY®

SEDAN®

SUPERBOND®

TechNix, the flagship brand of the Superbond Group, traces its origins back to Shalimar, a recognized leader in the automotive rubber parts sector with a rich legacy spanning sixty years. We take pride in our DAKKS Germany audited ISO 9001:2015 certification.

Our extensive distribution network covers the entire nation, allowing us to offer an unparalleled array of over 5000 rubber parts.

Emphasizing quality as a cornerstone of our operations, we are dedicated to not only meeting but surpassing the stringent performance standards of vehicles, even under the most challenging conditions

In recent years, the automotive industry has seen a notable rise in the demand for components that meet increasingly stringent NVH (Noise, Vibration, and Harshness) requirements. TechNix has emerged as a trailblazer in the development and production of High-Performance products, including a wide range of hydraulic engine mountings, rubber bushes, and strut kits

Our commitment to manufacturing excellence has enabled TechNix to attain the highest level of production quality. Our advanced machinery includes:

- Automated injection moulding systems for rubber,
- Fully automated blow moulding and injection moulding machines for plastics,
- Aluminum die casting machines,
- Shot blasting machinery,
- CNC machines
- 3D scanning technology, ensuring precision in crafting our moulds.
- Fully automated Poly-Urethane production machine

Through diligent research and development, our dedicated team has formulated exclusive materials for our products.

In today's fast-evolving market, characterized by an expansive array of vehicles and increasingly complex product requirements, TechNix remains committed to dynamism, driving innovation within the industry.

TechNix has a **DAKKS Germany** audited ISO 9001:2015 certification and is a certified data supplier to **TecDoc**.

TecDoc®
DATA SUPPLIER

BRACKET ASSEMBLY MOUNTINGS

Engine mountings earlier were simply a slab of rubber moulded between metal plates. With time, as the engines used in vehicles have become stronger, so have their NVH demands. Engine mountings today have intricate internal structures and critically designed aluminium bodies and brackets.

TechNix hydraulic mountings have been designed with functional fluid chambers in accordance with the latest technologies in the industry. The chamber contains a viscous fluid to dampen the motion. The decoupler and membrane together provide a passage for fluid flow which efficiently isolates vibrations under high stress conditions. The grade and thickness of metal used, along with the rubber hardness influence the natural frequency of the structure which regulates its performance.

Quarter Sectional View

Cross Sectional View

Isometric View

TechNix has been the leading brand which has developed hundreds of engine mountings to precision with its state of the art manufacturing technology, making them widely available to the market. We ensure the correct construction with an emphasis on performance.

We have also introduced electronic active mounts and vacuum-pipe mounts, keeping in pace with the advancing technologies. Be it for heavy duty cars, performance vehicles like SUVs, sports cars with V8 engines, TechNix has all the mountings, even for vehicles with 700 Horsepower, attaining speeds of over 300 kmph.

STRUT MOUNTINGS

Strut mountings play a vital role in shock absorption. They take much of the load when shock absorbers are under stress and ensure a smooth ride.

While strut mounts can be easily made to fit a vehicle, very few manufacturers can ensure optimum performance. With passing time, the rubber compresses under the load of the vehicle and strut mounts wear out.

TechNix's High Performance strut mounts are designed to surpass the strength of OEM mounts, with a reinforced and thickened mass made of the highest quality heat and grease resistant rubber.

Our range also includes aluminium and steel strut mounts, with thick, strengthened metals to bear the working load.

TechNix oversized strut mountings for added strength, insulation and longevity

OE design is smaller in size, prone to wearing out sooner

BRACKET ASSEMBLY MOUNTINGS

The development process for our engine mountings includes simulated computer analysis. The grade of the materials to be used is determined by optimisation on digital simulations to ensure the perfect performance

The images and graphs shown here illustrate the analysis and research for the development of an engine mounting done by our company in the fabrication stage.

Material	Force	Max equivalent stress	Max deformation	Min FOS
Cast steel	3KN	46.544 MPa	0.011407	7.4983
High carbon steel	3KN	46.688 MPa	0.010957 mm	15
Structural steel	3KN	46.564 MPa	0.010957 mm	15

Material	Force	Max equivalent stress	Max deformation	Min FOS
Cast iron	3 KN	10.358 MPa	0	15
	99 KN	341.74 MPa	0.031 mm	1.0066
Aluminium alloy	3 KN	7.0739 MPa	0.002mm	15
	83.85 KN	279.85 MPa	0.061 mm	1.0005
Magnesium alloy	3 KN	9.889 MPa	0.003 mm	15
	58 KN	190.97 MPa	0.065 mm	1.0107

RUBBER BUSHES

TechNix rubber bushes are manufactured to withstand heavy loads even in the most critical stress conditions. It is necessary for the rubber to be strongly bonded to the metal body as well as the inner pipe while maintaining the correct dimensions of the outer body as well as the diameter of the inner pipe to obtain a strong connection between the chassis and control arm, which retains its bond even under extreme stress.

Our bushes provide a smooth ride and prevent rattling noises, giving maximum suspension movement due to their low compression set. Our proprietary rubber compound mixture of NR, BR as well as anti oxidative agents, along with the moulding technology and high grade bonding agent produces bushes of unparalleled strength. The pipes and outer metal bodies are constructed in such a manner that they are able to withstand loads much higher than the vehicle would ever encounter.

PROTECTION BOOT KITS

PU BUMP STOPPERS

Scan to view our Testing Process

TechNix PU stoppers are manufactured in a completely automated process using an exclusive PU formulation. The raw materials are mixed automatically, ensuring absolute uniformity of the product. Stringent quality control tests are conducted for every production cycle. The stoppers have a high performance anti ageing agent, giving a shelf life of over five years. Even at temperatures as low as -40 deg Celsius, they do not harden, crack or decompose to powder. The hardness is optimised for every bumper according to its shape. All of these factors ensure a smooth riding experience, with minimal noise and vibration.

DUST COVERS

TechNix dust covers are made of the highest grade TPV polymer, providing elasticity, heat resistance, oil resistance and longevity. Even under extreme loads, they do not crack and retain their original shape. High elasticity enables them to respond rapidly to the shock absorber motion, ensuring a smooth ride. It protects dust particles from entering and lubricating oils from flowing out of the shock absorber.

STRUT BEARING

TechNix Strut Bearings are engineered to have the optimum level of smoothness to give the optimum response to the motion of the steering and suspension framework. Comprising of strengthened metal balls and high grade, heat resistant lubricating grease, which can withstand temperatures ranging from -200 to +1300 deg Celsius, an optimum level of torsional as well as vertical load resistance is achieved.

COIL PADS

TechNix Coil Pads are oversized and made of our proprietary rubber compound, enabling them to efficiently bear the weight of the coil spring without wearing out under the working load.

A series of horizontal dashed lines for writing notes, spanning the width of the page.
